SL Sprint 2 Story Points

Date	Issue	Event Type	Event Detail	Story Points		
				Inc.	Dec.	Remaining
01/Sep/26 1:49 PM	SL-10	Sprint start		5		
	SL-11			5		
	SL-8			5		
	Total					15
01/Sep/26 1:51 PM	SL-8	Burndown	Issue completed		5	10
01/Sep/26 1:53 PM	SL-10	Burndown	Issue completed		5	5
01/Sep/26 1:54 PM	SL-11	Burndown	Issue completed		5	0
01/Sep/26 1:55 PM	SL-10	Sprint ended by Khushi Gupta				0
	SL-11					0
	SL-8					0
	Total					0

Part 3 — Story Points & Priorities

Use a table:

ID	User Story	Priority	Story Points
US-01	Enter Monthly Electricity Consumption	High	3
US-02	Enter Monthly Transport Distance	High	3
US-03	Calculate Monthly CO ₂ e Emissions	High	5
US-04	View Monthly CO ₂ e Emissions	High	3
US-05	Compare Historical Emissions	Medium	5
US-06	Define Annual Carbon Reduction Target	Medium	3
US-07	Define Carbon Reduction Milestones	Medium	5
US-08	Track Reduction Target Progress	High	5

Reflection Questions:

1. Did your estimations reflect the actual effort?

ANSWER: Yes, the story point estimates were generally representative of the actual effort during the simulated sprints. Smaller stories such as entering consumption data required less effort, while calculation and progress-tracking stories involved more complexity and were therefore assigned higher story points.

2. Was your backlog well-prioritized?

ANSWER: Yes. High-priority stories were related to the core carbon-footprint calculation and monitoring functionality. Lower-priority functionality such as historical comparison and milestone definition was scheduled after the core data-entry and calculation functionality.

3. How did your simulated sprint align with your plan?

ANSWER: The simulated sprint generally aligned with the plan because the selected stories were completed by moving them through To Do, In Progress and Done. The first sprint focused on consumption input, calculation, viewing emissions and setting a target, while the second sprint focused on historical comparison, milestones and progress tracking.

4. What insights did the burndown chart give about your team's capacity?

ANSWER: The burndown chart showed how quickly the team completed the planned work during the sprint. A steady reduction in remaining story points indicated consistent progress. It also helped identify whether the team was on track to complete the committed work within the sprint duration.
